**EXHIBITION MIXTURE.** Each year there is a quantity of Dahlias which have become mixed in digging, or whose labels have become detached in storage. These we call our Exhibition Mixture because they are all Exhibition stock. For those who do not care about having the names of their Dahlias, this is an excellent buy. Per bulb, 30¢; per doz., \$3.00.

**NOTE:** There are some varieties on exhibition which are not listed here due to the fact that the amount of stock of these are very limited. They may, however, be ordered as quoted on price cards marked "SPECIAL."

LANSBURGH & BRO. guarantee every bulb and plant sent out to be true to name, and in growing condition, and will cheerfully replace any that prove otherwise. We can not guarantee results, as planting, cultivation, and weather are beyond our control.

DAHLIA AND GLADIOLI BULBS DELIVERED BETWEEN APRIL 1st-15th;  
DAHLIA PLANTS DELIVERED BETWEEN MAY 15th and JUNE 1st.

## *Dahlia Culture*

**D**AHLIAS will grow and bloom in almost any location, but will do best in a light soil where they can get the full day's sun. After preparing the soil by spading deeply and well pulverizing it, dig a hole about six inches deep and put the dahlia tuber in it, laying it FLAT, not on end. Then cover with about two inches of dirt and gradually fill in the hole as the plant grows; in this way the tuber is placed deep, so that it will always have moisture. Do not plant too early—about June first is a good time.

Green plants should be planted so that the first set of leaves is covered with earth.

Keeping the soil clean, that is, free from weeds, and well pulverized at all times is the most essential factor of Dahlia success.

When the plants have developed from four to six leaves, pinch out the center, thus making the plant branch out, which will make it more sturdy and able to withstand heavy wind.

Flower buds usually appear in threes, pinch out the two smaller buds; larger flowers will be the result. When the plants first show buds, a heavy mulch of good stable manure all around the plant will insure larger and better blooms. Give the plants plenty of water during blooming season.

When frost kills the plants in the fall, cut them off close to the ground. Dig the clumps and store in a dry, cool, frost-proof place for the winter.

GREEN PLANTS are rooted cuttings from clumps started early under glass. These green plants GROW, BLOOM, and MAKE CLUMPS the same as tubers do, and are packed in such a way as to reach you in perfect condition.

## *Gladiolus Culture*

**G**LADIOLI are not exacting as to soil and culture. They will grow and bloom under the most unfavorable conditions, yet like everything else grown, they do their best in a good soil, supplemented with good care, and will respond wonderfully to good nourishment and culture. Planting every ten or twelve days, covering the bulbs about four inches deep, from early April to the latter part of June will give a succession of flowers from the middle of July to October.

In the fall, when the foliage turns brown, they should be lifted, the tops cut off close to the bulb, and laid in a dry, airy place two or three weeks to cure. Then the old bottoms can be removed and the bulbs put in paper bags or shallow boxes, and stored in a dry, cool, frost-proof place for the winter.
